

The datawarehouse has the feature sets you need to build your model.

Cloud datawarehouse

A data warehouse which is cloud native and benefits from the on-demand scalability in compute and storage.

On-prem data warehouse is generally specialized hardware and software working together to support massive parallel querying.

Cloud data warehouse is hosted natively on cloud provider resources and allows on demand scaling of resources.

Lets explore snowflake as an example of a cloud data warehouse to understand the benefits.

On-demand Scalability

*Supports querying
semi-structured data
natively*
